Trick: Square any number ending in 5

Step by Step Explanation (with examples)

1. Multiply the digits before 5 with the number that comes after it.
2. Place 25 in the last!

Example 1→

$$35^2$$

Step 1 - First digit(3) * Next number(4)
- $3 * 4 = 12$

Step 2 - Place 25

Final answer → 1225

Example 2→

$$65^2$$

Step 1 - First digit(6) * Next number(7)

$$- 6 * 7 = 42$$

Step 2 - Place 25

Final answer → 4225

Example 3→

$$115^2$$

Step 1 - Digits before 5(11) * Next number(12)

$$- 11 * 12 = 132$$

Step 2 - Place 25

Final answer → 13225

The Battlefield

1. 25^2

2. 55^2

3. 75^2

4. 95^2

5. 125^2
